AAPG's Innovative Digital Immersive Geosciences (DIG) Platform Now Available for Purchase by Corporate and Institutional Buyers

What is DIG?: DIG is an immersive platform for hosting geological data that allows you to experience your data, not just read it. The platform is excellent for corporate and institutional buyers who want an immersive data experience that can host both their own data and AAPG's century of research.

TOTAL Sponsorship: TOTAL has agreed to be a sponsor for the continued development of the DIG platform.

"With all the features contained in DIG, we are convinced that the ultimate step for a safe, low-cost and smart integration of analogue surface information into subsurface models is now at our doorstep. And this is finally why it has been equally easy for Total to decide to become an early sponsor of the project,"

Pierre Esquier, TOTAL Technical Communications Manager and Geoscientist.

VWORLD Partnership: AAPG has teamed with the French technology firm VWORLD SAS to bring data to life.

"We're thrilled about our partnership with AAPG which gives us a tremendous occasion to showcase our viewTerra Evolution 4D Globe Viewer to the worldwide Geoscience community,"

Vincent Pourieux, President and CEO of VWORLD.

Pilot the Demo: Visit the **DIG booth (#2109)** and pilot the demo yourself. Experience the capabilities of immersive data can help your team visualize and understand geologic structure in a whole new way.
